Purpose

This policy is effective from 1 March 2024 and describes changes to the NATA Accreditation Criteria (NAC) applicable to all applicant and accredited Proficiency Testing Providers.

Background information

In May 2023, ISO/IEC 17043 *Conformity assessment — General requirements for the competence of proficiency testing providers* was published. This document replaces ISO/IEC 17043:2010 *Conformity assessment — General requirements for proficiency testing*.

Accredited facilities or those seeking accreditation must obtain a copy of the revised standard directly from a supplier of ISO.

The International Laboratory Accreditation Cooperation (ILAC) has mandated a three-year transition period from the date of publication of the standard. The transition date prescribed by ILAC ends in May 2026. As a signatory to the ILAC MRA, NATA is obligated to ensure transition of facilities to the new version occurs by this date. At the end of the period, accreditation of a facility to ISO/IEC 17043:2010 will no longer be recognised under the ILAC arrangement.

Assessment of facilities to ISO/IEC 17043:2023

From 1 March 2024, all assessments will be conducted against ISO/IEC 17043:2023.

Those facilities that have not transitioned to ISO/IEC 17043:2023 by 31 May 2026 will have their accreditation suspended.

Applicant facilities

Applicant facilities will be assessed against ISO/IEC 17043:2023 if they have not yet had an assessment conducted by NATA prior to 1 March 2024.

Accredited facilities

The changes between ISO/IEC 17043:2010 and ISO/IEC 17043:2023 are such that an assessment will be necessary to convert accreditation to the new standard.

Assessment to the new standard can occur either:

- at the time of the next scheduled NATA assessment after 1 March 2024; or
- on request of the facility as a chargeable variation to accreditation.

To assist facilities, a Gap Analysis between the two editions of the standard has been prepared, identifying the new and amended requirements detailed in ISO/IEC 17043:2023. This document can be downloaded from the NATA website at www.nata.com.au.

An additional *ISO/IEC 17043:2023 Implementation Checklist* has been prepared which identifies the specific changes accredited facilities need to adopt to satisfy the requirements of the new standard. This checklist is appended to this policy.

Assessment against ISO/IEC 17043:2023 at the next scheduled NATA visit

From 1 March 2024, accredited facilities will be assessed to the new standard at the time of their next routine assessment visit.

Facilities will be required to complete the *ISO/IEC 17043:2023 Implementation Checklist* and to supply information demonstrating compliance with the new standard, as part of the routine preliminary arrangements prior to an on-site visit.

Any areas of non-compliance identified at the scheduled NATA visit will be detailed in the assessment report as conditions as per the current NATA process. Facilities will need to respond to these in the usual manner prior to accreditation being continued and granted to the new standard.

The scope of accreditation will be updated to reference the new standard following confirmation of compliance, or where conditions have been raised, following a satisfactory response to these.

Assessment against the new standard on request of the facility

Facilities may seek accreditation against the new standard prior to a scheduled NATA visit by requesting a chargeable variation to the scope of accreditation. In order for this request to be considered, the facility must formally advise NATA in writing and submit supporting evidence (policies, procedures and records as necessary) to demonstrate compliance with the new standard.

Following review of the supporting information provided, NATA may request further evidence be provided, or may determine that an on-site assessment is necessary, should compliance against the new standard not be confirmed through desk-top review.

Variation visits are chargeable activities in accordance with NATA's Fee Schedule current at the time.

Transition multi-site facilities to ISO/IEC 17043:2023

Where a facility is recognised as a multi-site facility it is expected that the transition will occur for the entire facility. This will be assessed at the next scheduled NATA assessment of the primary site. For multi-site transition to occur, the facility must be able to demonstrate all sites within its network have been included in the implementation of ISO/IEC 17043:2023.

Further information

Further information can be obtained by contacting your NATA client coordinator.
